## **New Transmitter Improves W.N.T.C.**

WNTC is proud to announce that after over a year of work their new transmitter is now in operation. The transmitter was put into operation Monday evening, October 26, and the station may now be heard over a wider range. With improved quality and triple power, the output now ranks with the best carrier current college radio stations of the nation.

Carl Benedict, Bill Dodge, and Jerry Brill who all worked on this project may well be proud of their job. It is hoped that the power output may again be increased in the near future.

### **Cooperation**

As a part of its public service program WNTC is cooperating with the Pershing Rifles toward the successful completion of their blood donation program November 4 and 5. Bulletins are being delivered nightly giving the facts about the drive and telling the where, when, why, and how of blood donations.
